

# INFORMED

## Know what's below. Call 811 before you dig.

To avoid injury, expense, or embarrassment call 811 at least 48 hours before you begin a home improvement project. Calling 811 gets your underground utility lines marked **for free** so you'll be able to dig safely. Every digging job, no matter how small, requires a call, including:

- Pouring concrete
- Installing a mailbox or fence
- Building a deck
- Planting trees or shrubs
- Installing a pond or fountain
- Cleaning irrigation canals and ditches

Damage to pipelines during excavation is a leading cause of accidents resulting in serious injuries and fatalities, but these accidents are preventable, and you can help prevent them.

# PREPARED

## Morgan County Considers Community Safety a Top Priority.

County Emergency Services Officials have taken important steps to keep our community safe. Working with the US Department of Transportation's Pipeline and Hazardous Materials Safety Administration, the County has:

- Mapped utility locations,
- Identified evacuation areas and routes,
- Created real-time web maps of pipeline locations and information available to emergency responders in the field and,
- Coordinated with school officials regarding evacuation procedures should an emergency occur.

Community and pipeline safety is improved through active citizen participation especially with regard to public awareness, damage prevention, and emergency management efforts.
